

FLUOROSCOPY PROCEDURE PREPS

Fluoroscopy uses a continuous low-dose X-ray beam to produce images of organs and bones in real time. During this procedure, radiologists usually use contrast material (dye) to highlight the area being examined. The contrast material can be injected or taken orally or rectally.

Special instructions for GI/Small Bowel Exams Including UGI studies and swallow studies

Do not eat, drink, smoke or chew gum for at least 6 hours before your exam.
You may brush your teeth but avoid swallowing any water.

Medications can be taken

Special instructions for Barium Enemas and Air Contrast Enema Exams

Pick up a prep kit from your local pharmacy before your appointment and use the kit following the included instructions. Get with your Doctor for these.
